

The 3C Program: Improving respite care for recipients and their carers

CARERS, WE NEED YOUR HELP

We are seeking Carers to take part in an online survey

The survey aims to evaluate the use of personalised videos (“3C video vignettes”) as a way of more easily sharing important information about people entering residential respite care with aged care staff.

When you complete the survey, you will be presented with :

- Information about how our team produces these 3C video vignettes, and the purpose and content of video vignettes
- A real example of a 3C video vignette
- A series of questions that ask you to reflect on the above and provide your opinions

Your responses and insight as a Carer will be highly valued by our team

Your input will help us understand the potential ways we can improve residential respite care for older adults

Interested in participating?
